

USB Medical Peripheral – GlobalMed TotalExam 3 Camera

Key Features:

- Digital hand-held camera used to stream or record images and video of the human body.
- A pivoting head, intuitive button locations and improved ergonomics makes it easier to capture hard to reach images.
- Integrated LED lights for low-light illumination.
- Camera utilizes interchangeable attachments making it ideal for multidiscipline medical applications:

General viewing lens	
Otoscope attachment	
Polarizing Hood	

Limitations:

- USB camera certified for use with a personal videoconference system; not for use with a videoconferencing codec/cart.
- When in a video call, at the referring site, the hand-camera image will be displayed in the picture-in-picture (PIP).
- The camera must be plugged into the laptop and powered "ON" prior to logging into the OTNhub for the USB camera to be recognized by the videoconferencing application.

Basic Specifications:

- HD Video Stream over USB 3.0 output
- 720p image resolution and clarity
- Automatic focus
- Pivoting Head (3 positions)
- Integrated Freeze-Frame (FF Button)
- White balance (WB Button)
- Powered by USB 3.0 ports (No External Power Supply Needed)
